

## Shelf Life of Golledge Electronics Products

Golledge Electronics *components*, where those components are not moisture sensitive (i.e. they are not specifically labelled MSL2 or above) have essentially an unlimited shelf life (that is > 3 years) unless stated in any specification or other related document. This is the vast majority of non-MSL components. Often those components are supplied on Tape or Tape & Reel. The *tape* has a shelf life of 3 years when kept under "normal" warehouse conditions of temperature and humidity (that is temperature 15~30°C and humidity 40~80%).

Where the components are labelled as MSL2 or above the shelf life is dictated by the MSL level and compliance to the dictated conditions.

For and on behalf of Golledge Electronics Ltd.
